SUMMARY

Currently, I'm working at AIA Singapore as Software Engineer/Analyst. Also, I am multidisciplinary Software Engineer with a strong command of both backend and frontend development. I also have experience in graphic design and UI design, allowing me to bridge the gap between functionality and aesthetics. Outside of tech, I'm passionate about video and photo editing, as well as videography and photography.

EXPERIENCE

AIA Singapore

- Engineer/Analyst (September 2023 - Present)

- Internship (March 2023 - August 2023)

- Developed new features for the company's insurance agent super-app, ensuring smooth integration with existing modules and enhancing overall user experience. Working on BAU items to ensure the quality of improvement
- Handled Business-as-Usual (BAU) tasks to maintain, troubleshoot, and improve application quality, stability, and performance across multiple platforms.
- Ensured controlled and high-quality deployment by documenting all release items, tracking development progress in Jira, validating user testing results, and preparing deployment packages for Change Advisory Board (CAB) approval.
- Supporting deployment processes by preparing build packages, assisting the DBA or related release team during production rollout, and verifying post-deployment functionality to ensure smooth service continuity.

PT. Panasonic Industrial Devices

Production Assistant 3 HR Section - Web Developer (July 2022 - March 2023)

- Developing Web-based training system to track and monitoring employee training progress and document.
- Project initiation of e-Learning with Web-based system to enhance the current Learning Management System (LMS) in Panasonic Industrial Devices.
- Support employee training.

Hidropol (Project Based Learning)

Fullstack Engineer (January 2022 - September 2023)

- Developed and maintained microservices architecture to facilitate seamless communication between IoT devices, web applications, and the central database, ensuring scalable and high-performance data flow.
- Integrated RESTful APIs with IoT devices, enabling reliable bidirectional communication for telemetry data, remote commands, and real-time device monitoring.
- Built fullstack features across backend microservices and frontend web interfaces, collaborating closely with hardware engineers and product teams for seamless end-to-end delivery.

Proo

Intern Fullstack Developer (December 2021 - February 2022)

- Converted Figma UI designs into responsive and reusable React.js components for production-ready web interfaces.
- Built and maintained backend services using Express.js and Sequelize, including API development, data modeling, and database operations.

EDUCATION

State Polytechnic of Batam (2019 - 2023)
Multimedia & Networking Engineering (D4) - 3.57

SKILLS

- NodeJS & ExpressJS
- Sequelize ORM
- ReactJS
- NextJS
- Figma
- Jira
